

Please do not approve the BPL Docket 03 104. If BPL is allowed to move forward it will cause interference to the amateur radio service. Interference caused by BPL would severely hinder the amateur radio service to provide HF and VHF emergency communications. We need the HF and VHF spectrum free of the interference that will be caused by the use of BPL. ARRL tests, on existing BPL systems, show measured interference levels as high as S-9. Even buried power cables show significant interference levels in the amateur bands. I urge you not to allow BPL Docket-03-104 to move forward. Thank You, Dennis Franklin K6DF
